Dear Mrs./Mr.,

I am thrilled to have such an opportunity to apply as a summer IT intern within Sofrecom team. I am highly motivated for this opportunity since I am very interested about the 2nd project, it is actually what I am looking to learn this summer.

I am currently a software engineering student at INSAT where I am able to learn several programming languages such as C++, C#, Java..., web development, database management, operating systems and many others.

And if you ask me about my favourite fields, I would say everything related to programming and solving problems.

Also, I like working with OOP and design patterns and I enjoy working on backend development especially using Java frameworks.

Being an INSAT student taught me to be prepared to new challenges by learning something new every day. As you will see in my resume, I have developed my skills in different languages.

Besides, I am currently learning about Node.js, docker and Cloud engineering, and I am also interested in learning about algorithms from time to time.

I have developed strong teamwork and time management skills through my volunteer work within clubs. My failure and success in different positions could prove my commitment to work and my dedication to achieve what I want.

My goal this summer is to build a strong knowledge about these different topics

- Angular
- Node.js / Nest
- Higher level in springboot and reactjs
- Microservices
- CI/CD – Jenkins - docker - kubernetes
- Deployment
- Git workflow

This is why I said that I really like the subject, it will help me achieve the majority of my goals.

This opportunity will be not only my new challenge but also an occasion to meet people that I can really learn.

Thank you for your time and consideration.

Sincerely

Riheme.
